# About Us

**"Adwait is unique."**

We are, a unique business that is built on a solid foundation; an energetic group with a gifted workforce and controlling heads. We take pleasure and pride in extending ourselves in order to endow our customers with the best quality products and timely services.

## Why Us

- Every last edge of our product experiences a severe quality examination before it is dispatched
- Directly from the mines to preparing plant and lastly to delivery, our staff approach of teamwork is our strength in ensuring a best value product.
- We take pride in our administrators and exceptionally gifted specialists who consistently attempt to improve on their execution skills and capacities and thus can ensure an excellent quality product but at a competitive price with an on-time delivery
- We know that the nature of packaging is as significant as the quality and promptness of products and that's why we utilize the high-quality packaging, custom made to your needs, to ensure the strength and safety of product, ease of handling and the attractive presentation
- We believe in communication and that's why we have in place an information system that provides you with a real-time update on the progress of your order

## Sandstone

Granite is a volcanic stone shaped by fluid magma from inside the earth compelling itself between existing layers of rock and inevitably chills off to a strong state. The fundamental minor components of magma are quartz, feldspar and mica. During this moderate cooling measure, components of neighboring rocks are consolidated. Since it's made under tension and cools gradually, it is probably the hardest stone found on earth.

### Finish

- Natural hand-cut
- Calibrated
- Tumble-Antique
- Sawn
- Sandblast
- Polish-Honed

### Sizes (mm):

- 600 x 1200/900/600/290
- 560 x 1200/840/560/275
- 290 x 290
- 275 x 275

We can provide you with make to Measure Sizes also

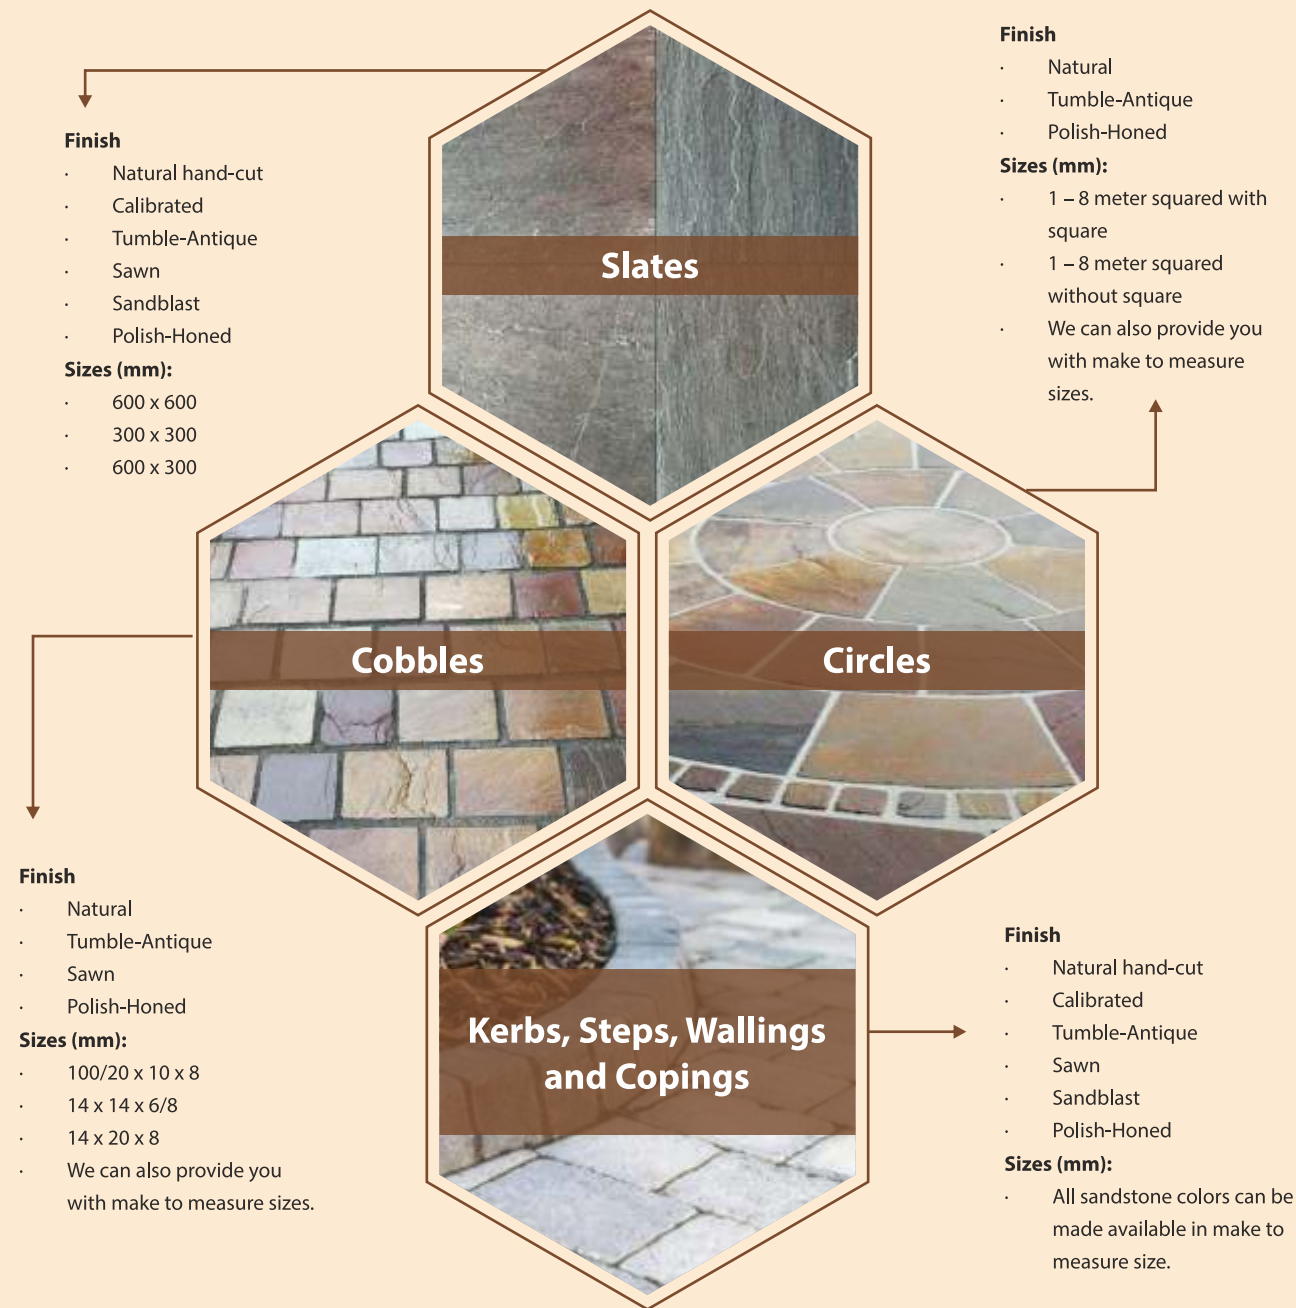

## OUR PRODUCT

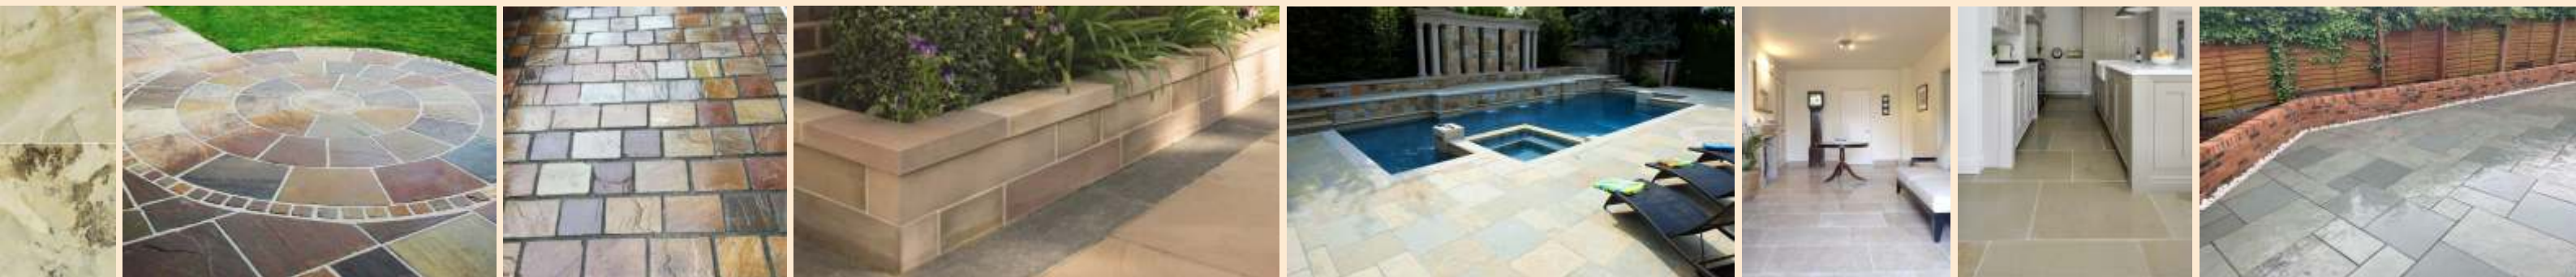

# Sandstone-Subcategories

Subcategories of Sandstone are Slates, Cobbles, Circle, Kerbs, Steps, Wallings and Copings.

# Limestone

Limestone is a hard rock with thick surface inferable from its calcareous nature. This sedimentary stone is fundamentally made out of different gem types of Calcium Carbonate (CaCO3) and is very adaptable. It is water and ice safe, non-tricky and flame resistant. It is one of the most homogenous regular rocks found on Earth's surface.

# Granite

The squares are cut into sections utilizing Gang Saws/Wire saws covered with abrasives, for example, precious stone and sand, these chunks are then cleaned/flushed subsequent to being cut into required thickness. at that point delivered.

*The following are the common sought-after varieties of Granite :-*

*They are commonly available in following forms:*  
**Thickness :** 16-17mm to 50mm  
We can provide you with make to measure sizes also
